

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview for Request: cder_mpl1r_wp191

Request ID: cder_mpl1r_wp191

Request Description: In this report we examined uptake of brodalumab in the Sentinel Distributed Database (SDD). This is the first report of an ongoing plan to monitor uptake of brodalumab until sufficient follow-up accrues among treated patients to conduct an inferential analysis examining rates of serious infection, acute myocardial infarction/stroke, and inpatient neutropenia in plaque psoriasis patients initiating brodalumab compared to plaque psoriasis patients initiating non-brodalumab biologics.

Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 9.4.1

<u>Data Source:</u> We distributed this request to seven Sentinel Data Partners (DPs) on January 7, 2021. The study period included data from February 15, 2017 through February 29, 2020 (most recent end date of available data). Please see Appendix A for a list of dates of available data for each Data Partner.

<u>Study Design:</u> We identified individuals with incident use of brodalumab among a cohort who were 18 years and older. This is a Type 2 analysis in the Query Request Package (QRP) documentation.

Exposures of Interest: We defined the exposure of interest, brodalumab, using outpatient dispensing data. The first qualifying dispensing (index) was identified for adult men and women with and without a diagnosis of plaque psoriasis; cohort re-entry was not allowed. Please see Appendix B for a list of generic and brand names of medical products.

Cohort Eligibility Criteria: We included four cohorts that varied in their eligibility criteria. Two cohorts required members to be enrolled in health plans with medical and drug coverage in the 30 days prior to their index date in order to be included in the cohort; a gap in coverage of up to 45 days was allowed and treated as continuous enrollment in these two cohorts. We defined incident exposure in these two cohorts as no evidence of a brodalumab dispensing in the previous 30 days. One of these cohorts required evidence of a plaque psoriasis diagnosis in the 30 days prior to the index dispensing. The two additional cohorts required members to be enrolled in health plans with medical and drug coverage in the 90 days prior to their index date in order to be included in the cohort; a gap in coverage of up to 45 days was allowed and treated as continuous enrollment in these two cohorts. We defined incident exposure in these two cohorts as no evidence of a brodalumab dispensing in the previous 90 days. One of these cohorts required evidence of a plaque psoriasis diagnosis in the 30 days prior to the index dispensing. The following age groups were included in all cohorts: 18-24, 25-34, 35-44, 45-54, 55-64, 65-74, and 75+ years. See Appendix C for a list of International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes used to define the inclusion criteria.

Follow-up Time: Follow-up began on the day of the index dispensing and continued until the first occurrence of any of the following: 1) disenrollment; 2) death; 3) the end of the data provided by each Data Partner; 4) the end of the query period; 5) the end of the treatment episode; or 6) initiation of a comparator treatment. In the two cohorts requiring 30 days of pre-index enrollment, treatment gaps up to 45 days between consecutive brodalumab dispensings were considered the same treatment episode and an episode extension of 45 days was applied. In the two cohorts requiring 90 days of pre-index enrollment, treatment gaps up to 60 days between consecutive brodalumab dispensings were considered the same treatment episode and an episode extension of 60 days was applied. See Appendix D for a list of generic and brand name medical products of comparators and Appendix E for a list of Healthcare Common Procedure Coding System (HCPCS) procedure codes used to define comparators in this request.

Baseline Characteristics: We assessed the following characteristics prior to the index date of brodalumab initation: age, year, sex, ulcerative colitis, Crohn's disease, psoriatic arthritis, rheumatoid arthritis, ankylosing spondylitis, juvenile rheumatoid arthritis, hidradentis suppurativa, and plaque psoriasis. For the two cohorts that required 30 days of pre-index enrollment, we assessed these characteristics in the 30 days prior to the index date. For the two cohorts that required 90 days of pre-index enrollment, we assessed these characteristics in the 90 days prior to the index date. See see Appendix F for a list of ICD-10-CM codes used to define baseline characteristics in this request.

Please see Appendix G for the specifications of parameters used in this request.

<u>Limitations:</u> Algorithms used to define exposures and inclusion criteria are imperfect; thus, it is possible that there may be misclassification. Additionally, death data in the SDD are incomplete. Therefore, data should be interpreted with these limitations in mind.

<u>Notes:</u> Please contact the Sentinel Operations Center (info@sentinelsystem.org) for questions and to provide comments/suggestions for future enhancements to this document. Glossary of Terms for Analyses Using Cohort Identification and Descriptive Analysis (CIDA) Tool*

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per National Drug Code (NDC) per dispensing. **Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). Along with the Principal Diagnosis Indicator, forms the Care Setting/PDX

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Cohort Definition (drug/exposure) - indicates how the cohort will be defined: (1): Cohort includes only the first valid treatment episode during the query period; (2): Cohort includes all valid treatment episodes during the query period; (3): Cohort includes all valid treatment episodes during the query period until an event occurs.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

Event Deduplication - specifies how events are counted by the MP algorithm: (0): Counts all occurrences of an HOI during an exposure episode; (1): de-duplicates occurrences of the same HOI code and code type on the same day; (2): de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions days are added after any episode gaps have been bridged

Lookback Period - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered. **Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

Appendix F. List of International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Baseline Characteristics in this Request

Code	Description	Code Category	Code Type
	Plaque Psoriasis		
L40.0	Psoriasis vulgaris	Diagnosis	ICD-10-CM
L40.1	Generalized pustular psoriasis	Diagnosis	ICD-10-CM
L40.2	Acrodermatitis continua	Diagnosis	ICD-10-CM
L40.3	Pustulosis palmaris et plantaris	Diagnosis	ICD-10-CM
L40.4	Guttate psoriasis	Diagnosis	ICD-10-CM
L40.8	Other psoriasis	Diagnosis	ICD-10-CM
L40.9	Psoriasis, unspecified	Diagnosis	ICD-10-CM

Appendix G. Specifications Defining Parameters for this Request

This request estimated uptake of brodalumab in the Sentinel Distributed Database (SDD).

Query period: February 14, 2017 - February 29, 2020

Coverage requirement: Medical & Drug Coverage

Post-index enrollment requirement: None

Enrollment gap: 45 days

Age groups: 18-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75+

Stratifications: Age group, Sex, Calendar year

Envelope macro: Reclassify encounters during inpatient stay as inpatient

Freeze data: No
